

ARGs in Water Distribution System in Glasgow: Does the problem really exist?

Sadia Khan and Charles W. Knapp

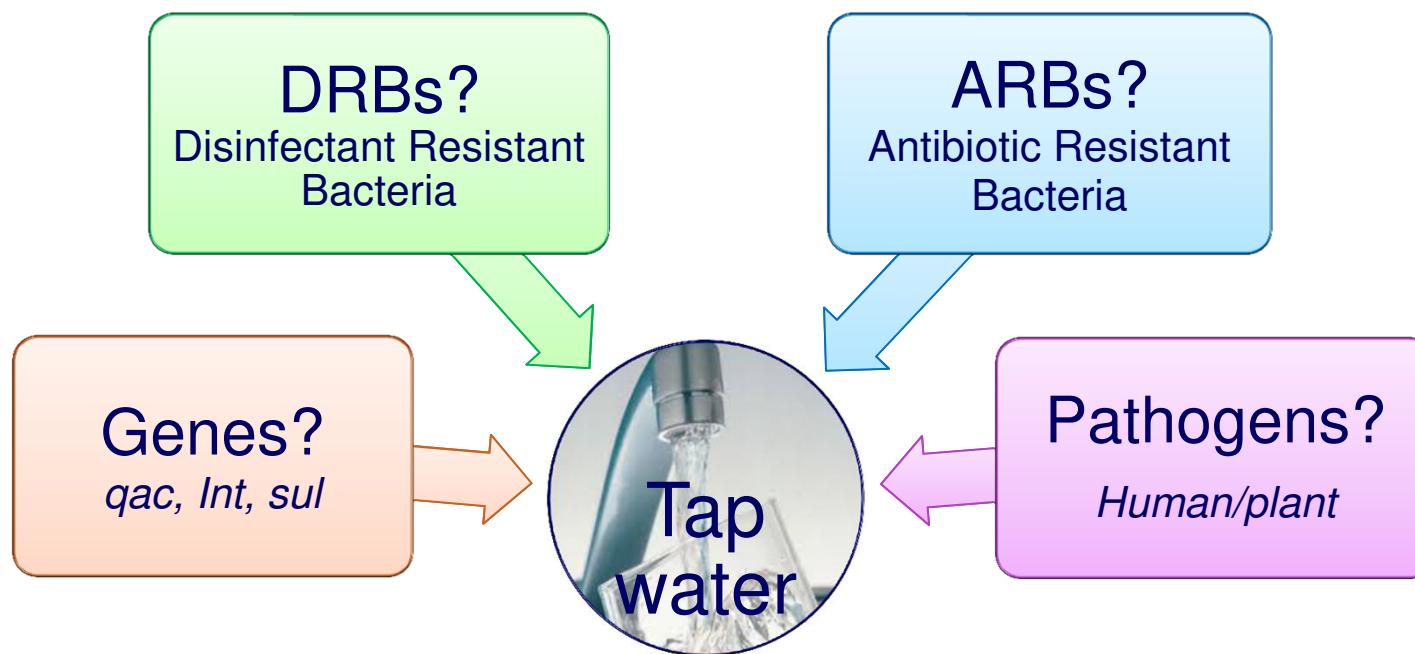

Department of Civil and Environmental Engineering
University of Strathclyde, Glasgow, UK

Introduction

Aims and Objectives

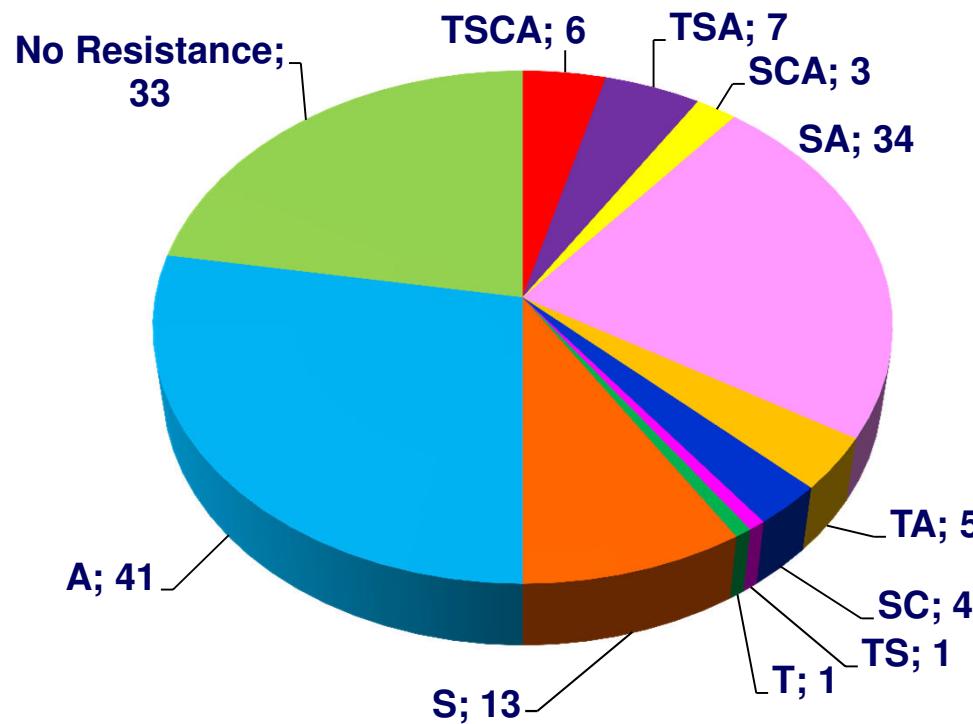

Experimental

1. Membrane filtration ($0.22\mu\text{m}$, 100mL sample)
2. Agar dilution for MIC against 4 antibiotics (Tetracycline, sulfamethoxazole, ciprofloxacin, Amoxicillin)
3. Suspension test for chlorine and monochloramine (200mL PBS, pH 7 and 8)
4. Identification of bacteria and genes detection (gene sequencing and PCR)

Figure-1: Bacterial Resistance Against Antibiotics

Quadruple: 6
Triple:10
Double:44
Single:55

Standard*/Control
Tet: $\geq 16 \mu\text{g/mL}$
Sulf: $\geq 512 \mu\text{g/mL}$
Cip: $\geq 4 \mu\text{g/mL}$
Amox: $\geq 32 \mu\text{g/mL}$

Figure-2: Zone of inhibition (mm) against NaOCl

Figure-3: Bacteria Identified by Gene Sequencing

<i>Arthrobacter</i>	<i>Burkholderia</i>	<i>Dietzia</i>	<i>Pantoea</i>
<i>Acidovorax</i>	<i>Dermacoccus</i>	<i>Ralstonia</i>	<i>Cupriavidus</i>
<i>Kocuria</i>	<i>Micrococcus</i>	<i>Blastomonas</i>	<i>Janibacter</i>
<i>Comamonas</i>	<i>Bacillus</i>	<i>Sphingomonas</i>	
<i>Brevibacillus</i>	<i>Variovorax</i>	<i>Enhydrobacter</i>	
<i>Paenibacillus</i>	<i>Escherichia</i>	<i>Staphylococcus</i>	

Table-1: Genes detection (*qac*, *Int-1*, *Int-2*, *sul1*, *sul2*)

Genes	Found in organisms
<i>qac</i>	Not found
<i>Int-1</i>	<i>Arthrobacter</i> , <i>Dermacoccus</i> , <i>Micrococcus</i> , <i>Kocuria</i> , <i>Cupriavidus</i> , <i>Variovorax</i> (9)
<i>Int-2</i>	Not found
<i>sul1</i>	<i>Dermacoccus</i> , <i>Staphylococcus</i> , <i>Kocuria</i> , <i>Cupriavidus</i> , <i>Bacillus</i> , <i>Paenibacillus</i> , (8)
<i>sul2</i>	<i>Micrococcus</i> , <i>Cupriavidus</i> , <i>Ralstonia</i> , <i>Bacillus</i> (4)
<i>Int-1 + sul1</i>	<i>Dermacoccus</i> (1)
<i>Int-1 + sul2</i>	<i>Micrococcus</i> (1)
