

海南中部山区南渡江流域水生生物综合评价

Comprehensive evaluation of aquatic organisms in the Nandu River Basin of the central mountain area, Hainan Island

徐德琳 Delin Xu
生态环境部南京环境科学研究所
Nanjing Institute of Environmental
Sciences. MEE

outline

01

Background

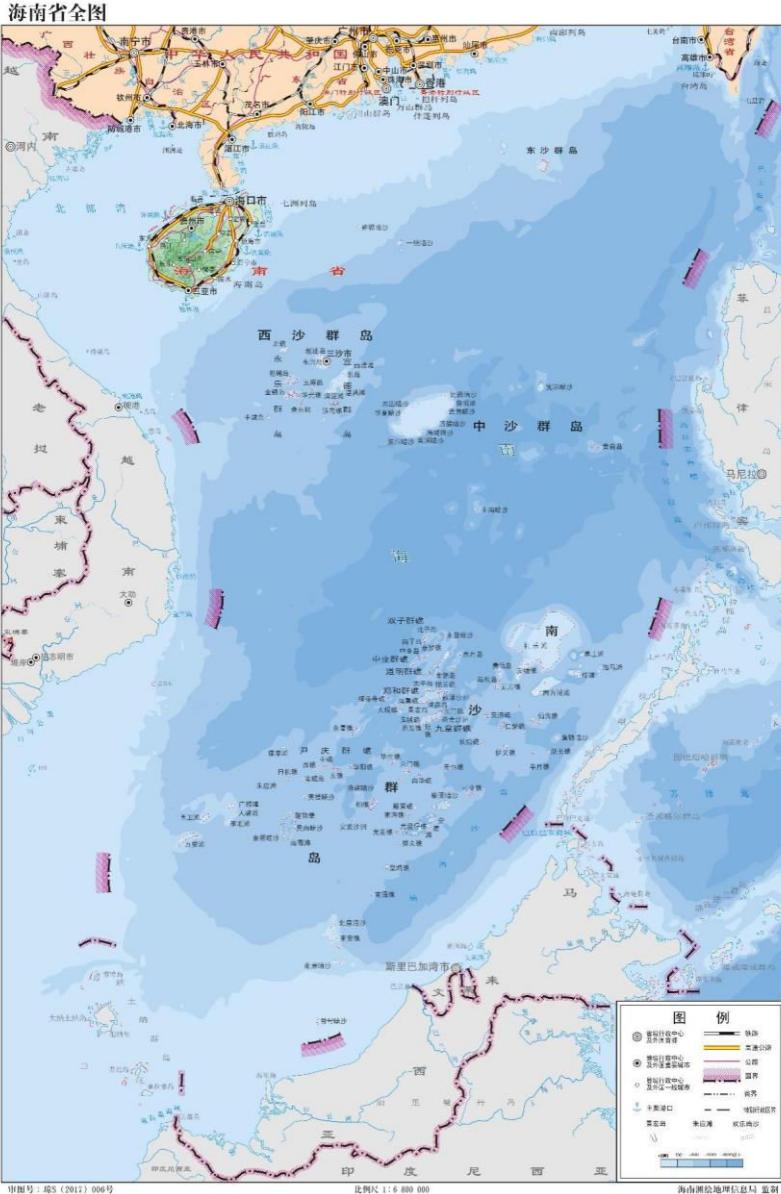

02

Methods

03

Results

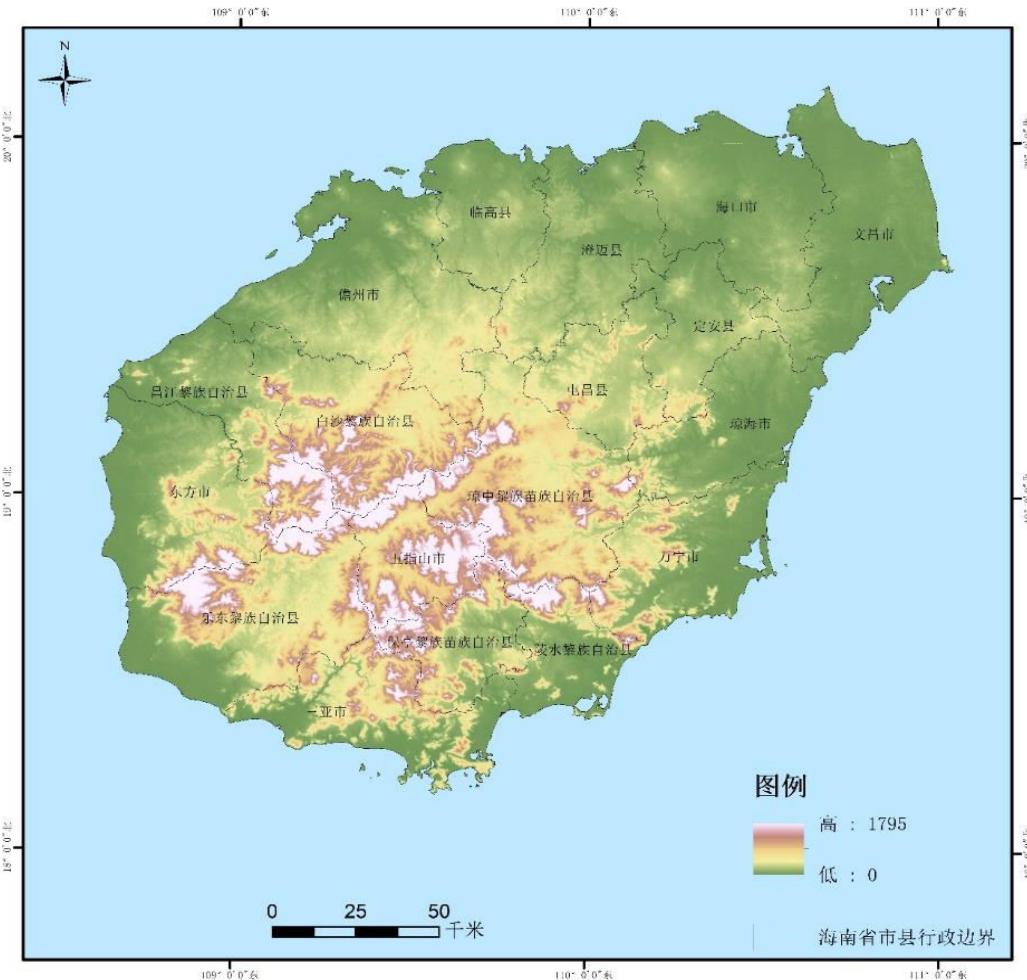

Background

Hainan Island
the second largest island
of China

Its ecosystem is relatively unique, and its ecological status is very important.

Background

海南岛地形图
Topographic Map of Hainan Island

□ 地势为中部高四周低，中间高耸，向外围逐级下降，由山地、丘陵、台地、平原构成环形层状地貌，梯级结构明显。

The terrain is high in the middle and low in the surrounding areas.

□ 海南岛比较大的河流大都发源于中部山区，组成辐射状水系

So the larger rivers of Hainan Island basically originate from the central mountainous areas.

Background

- 南渡江是海南岛最长的河流，河流全长335km，是海南岛三大河流之一，流域面积超过7000km²，涉及8个市县。另外两条分别是昌化江和万泉河。
- The Nandu River is the longest river in Hainan Island, 335 kilometers in total length, The watershed area exceeds 7000km², Involves 8 cities and counties.

Background

The source of the Nandu River

Middle reaches of the Nandu River

The estuary of the Nandu River

研究目标

Research Objectives

- 确立南渡江水生生物评价方法，评价南渡江流域多尺度（**水体-县域-流域尺度**）水生态系统健康情况。
- Establish the methods for aquatic organisms evaluation in the Nandu River, and valuate the health of aquatic ecosystems of the Nandu River Basin at the multi-scale (**water body-county-watershed scales**).

Methods

The Nandu River Range

建立流域水生生物评价方法
Establishing the evaluation framework
for aquatic organisms in river basins

指标数据获取：现场调查、遥感解译
Get data: field investigation and
remote sensing interpretation

Evaluation Framework

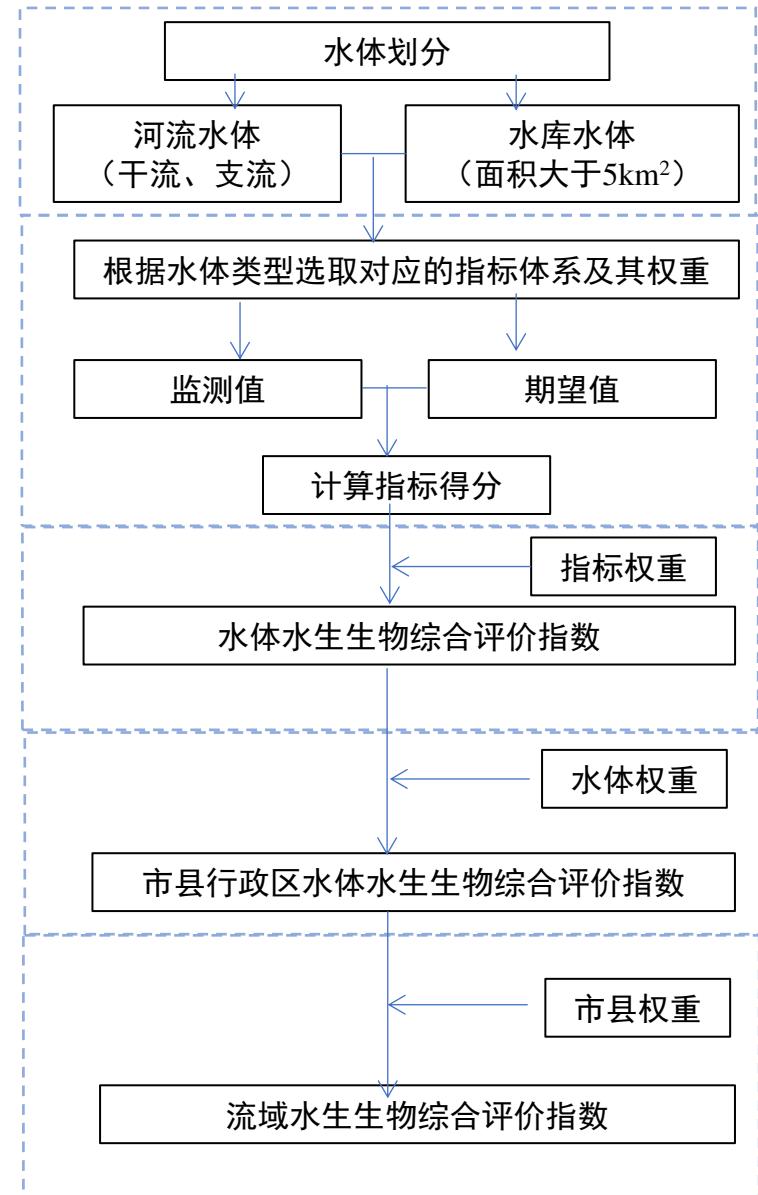

step 1:
水体划分
Division of water bodies

step 2:
指标选取与评价
Index evaluation

step 3:
水体水生生物综合评价
Comprehensive evaluation at water body scale

step 4:
市县行政区水生生物综合评价
Comprehensive evaluation at county scale

step 5:
流域综合评价
Comprehensive evaluation at watershed scale

➤ **评价水体划分:** 将南渡江流域水体分为河流水体和水库水体，列出水体清单。

Division of water bodies: Divide the water bodies in the Nandu River Basin into river water bodies and reservoir water bodies.

➤ **指标选取与评价:** 选取评价水体对应的指标体系与权重，通过**监测值与评价期望值**，计算得到指标得分。

Index evaluation: Determine indicators and weights, determine monitoring values and expected value.

➤ **水体水生生物综合评价:** 各评价指标得分乘以指标权重，加权求和得到**水体水生生物综合评价指数**。

Comprehensive evaluation aquatic organisms at water body scale:

Evaluation Framework

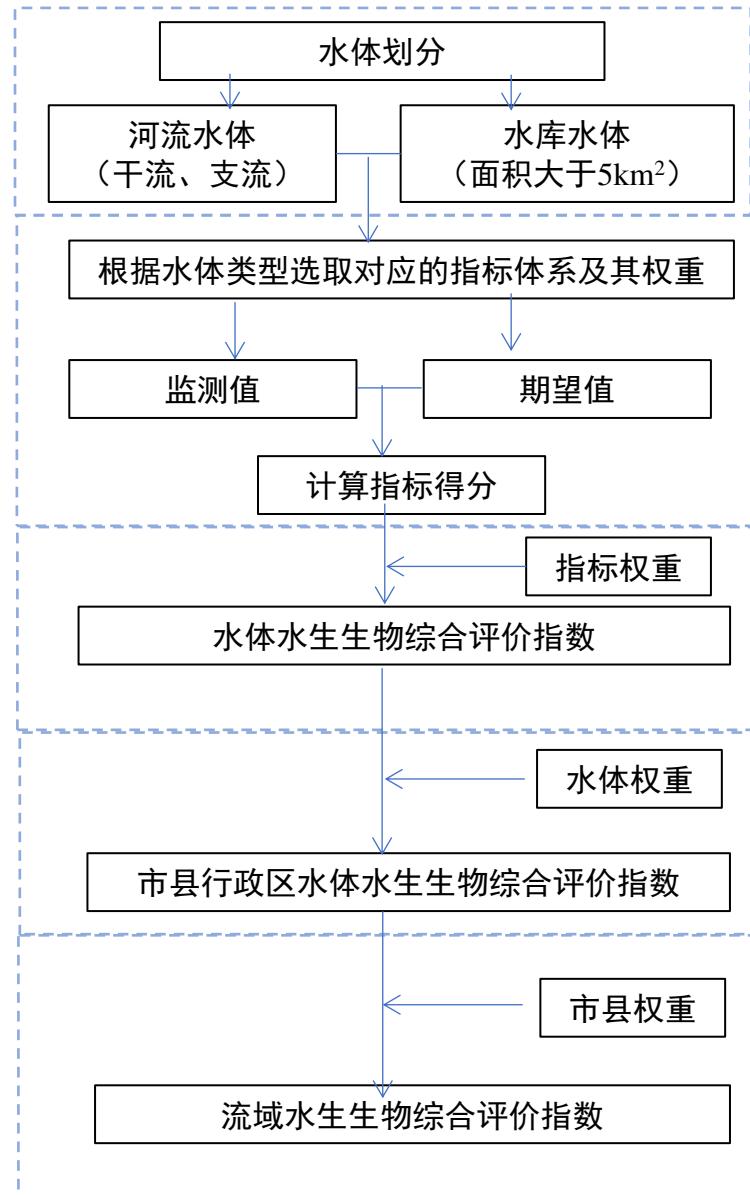

step 1:
水体划分
Division of water bodies

step 2:
指标选取与评价
index evaluation

step 3:
水体水生生物综合评价
Comprehensive evaluation at water body scale

step 4:
市县行政区水生生物综合评价
Comprehensive evaluation at county scale

step 5:
流域综合评价
Comprehensive evaluation at watershed scale

➤ **市县行政区水体水生生物综合评价**: 根据河流水体和水库水体生态综合评价指数和各水体权重，得到流域内**市县行政区水体水生生物综合评价指数**。

Comprehensive evaluation aquatic organisms at county scale

➤ **流域水生生物综合评价**: 根据各市县行政区水生生物综合评价指数和各市县权重，得到三大流域各自的水生生物综合评价指数。

Comprehensive evaluation aquatic organisms at watershed scale

指标筛选
原则
Principles of
index
screening

针对性：以流域主要的水生态环境问题为导向，可作为水生态系统变化的晴雨表。

Targeting the ecological and environmental problems

可操作性：方法成熟、易获取、成本低、有改进空间。

Can be obtained easily

差异性：体现流域内河流和水库生态系统的差异性。

Reflect the ecosystem differences

单指标评价
Single indicator evaluation

河流水体水生生物评价指数
Evaluation index of aquatic organisms in
river water bodies

$$ES_{R1} = (SF_R + PHS_R + GI_R + SZ_R + IBI_R + SK_R + AS_R) / 7$$

式中：

ES_{R1} ——类型 1 河流水生生物评价指数；

SF_R ——鱼类物种数得分；

PHS_R ——浮游植物 Shannon-Wiener 多样性指数得分；

GI_R ——着生藻类硅藻属指数得分；

SZ_R ——小型枝角类相对丰度得分；

IBI_R ——大型底栖动物完整性指数得分；

SK_R ——重要水生生物物种数得分；

AS_R ——外来物种入侵度得分。

$$ES_{R2} = (SF_R + PHS_R + GI_R + SZ_R + IBI_R + AS_R) / 6$$

式中：

ES_{R2} ——类型 2 河流水生生物评价指数；

SF_R ——鱼类物种数得分；

PHS_R ——浮游植物 Shannon-Wiener 多样性指数得分；

GI_R ——着生藻类硅藻属指数得分；

SZ_R ——小型枝角类相对丰度得分；

IBI_R ——大型底栖动物完整性指数得分；

AS_R ——外来物种入侵度得分。

水库水体水生生物评价指数
Evaluation index of aquatic organisms in
reservoir water bodies

$$ES_K = (SF_K + PHS_K + SA + SZ_K + AS_K) / 5$$

式中：

ES_K ——水库水生生物评价指数；

SF_K ——鱼类物种数得分；

PHS_K ——浮游植物 Shannon-Wiener 多样性指数得分；

SA ——水华面积比例得分；

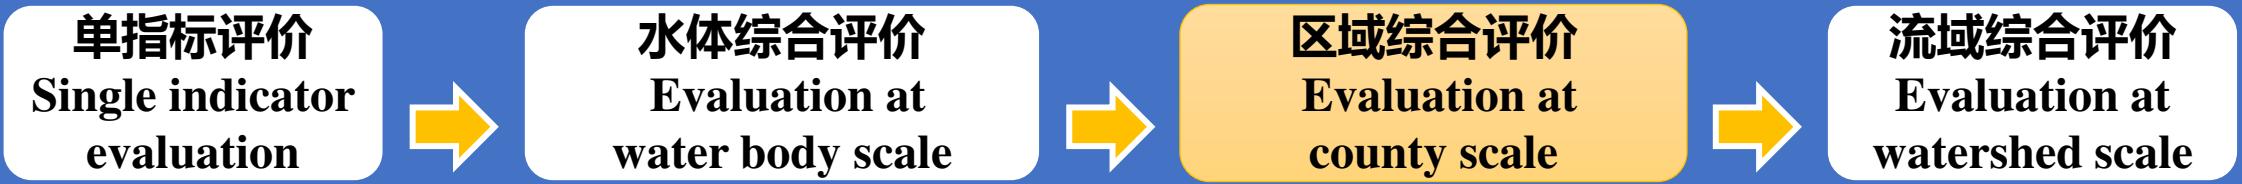

SZ_K ——小型枝角类相对丰度得分；

AS_K ——外来物种入侵度得分。

有重点保护水生生物河流水体
River water bodies with
protecting aquatic organisms

没有重点保护水生生物河流水体
Rivers without protecting
aquatic organisms

水库水体
Reservoir water bodies

根据市县行政区内河流（干流、支流）和水库等各水体**水生生物评价指数**和**水体权重**，加权求和得到市县水生态综合评价指数。

According to the aquatic organism evaluation index and water body weight of rivers (main streams, tributaries) and reservoirs of each county, the comprehensive evaluation aquatic organisms of at county scale were obtained by weighted summation.
