

Understanding Collaborative Water Governance in China

Mengyao Li PhD Candidate University of Melbourne

第18屆 世界水资源大会 ^{#5万物:}

Water for All:

Harmony between Humans and Nature

11 -2

Brief review on China's water governance

- Significant investments in water management and infrastructure
- Reforms and pilots
- Institutional setting

China has implemented the fastest change in its water governance system in recent decades (Jia and Zhang, 2011).

Special attention to lakes

- 2,621 natural lakes (over 1 km²) and in total a surface area of 82302 km² (2020).
- Lakes are valuable resources for people in a variety of ways.
- Lakes are an important part of the water cycle.
- Hot spots of Human-Nature disharmony:
 - Rapid population growth
 - Excessive lake reclamation and development activities
 - Climate change

Reconsider Lake and People

Policy shifts have rescaled hydro-social relations and brought new actors in water governance.

- Ostrom: Governing the Commons and collective action
 - A decentralized approach to decisions and resource management.
 - Local institutions for governing commons and polycentric governance.
- Water Governance in China's State-society Relations
 - State-centric approaches rely on administrative measures, and governments take leading responsibilities (Jia & Li, 2021).
 - "State-led civil society" and "Consultative authoritarianism" in China.
 - Private sector's engagement could improve the coverage, quality and efficiency of water-related ecosystem services (Newborne, 2012).
 - Mass media promotes environmental activism and public participation, but facing increasing censorship (Dai & Spires, 2018).

Why Collaborative Water Governance?

- Ineffective coordination due to complex interjurisdictional interactions aggravate water conflicts among different stakeholders.
- Collaboration between state and non-state actors is **desirable**.
- Viewing collaborative water governance as a solution to predominantly technical and managerial problems overlooks the social and political processes that shape the different forms and performance of water governance.
- Mentioned in <u>various water policies</u> (national, provincial and local) and also as a discourse, but no systematic investigation at the **implementation level**.

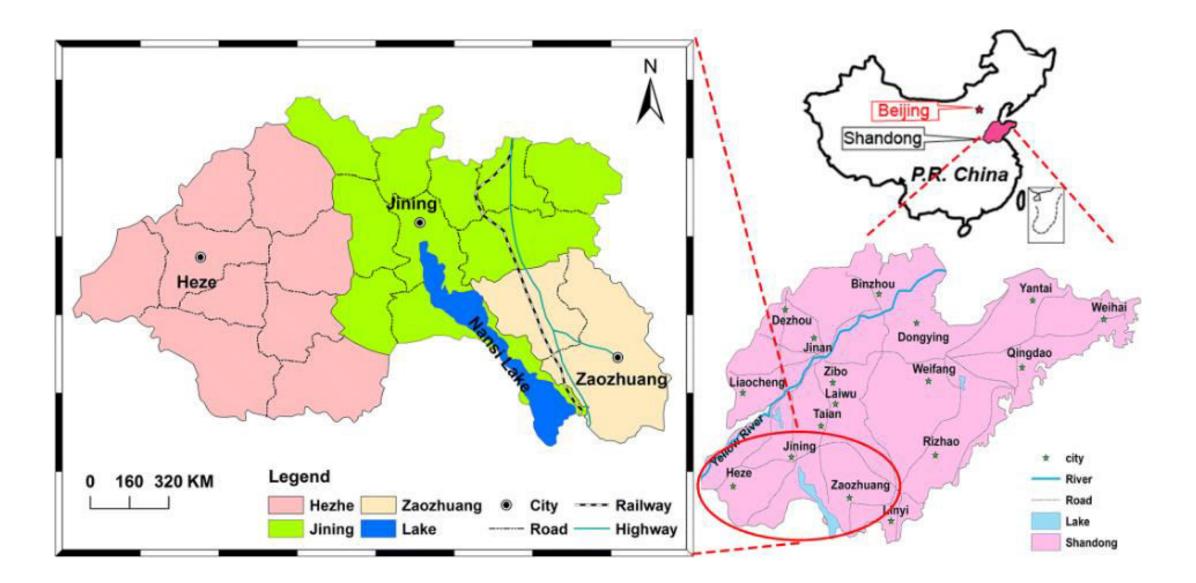

| The Constitution of the PRC (1982) | Formally and essentially defined Chinese citizens' rights to participate in the management of national affairs. |
|--|--|
| The Law of the People's Republic of China on Environmental Impact Assessment (2003) | Explicitly conferred citizens' environmental rights and interests, and further elaborated on the scope and procedures of public participation in EIA. |
| Civil Procedure Law of the People's Republic of China (2013) | Explicitly defines litigation for public interest in Article 55. |
| Environmental Protection Law of the People's Republic of China (revised in 2014) | Incorporate public participation into the basic principles and detailed the related content of information disclosure and public participation, including the right to know, the right to participate, the right to supervise, and the right to litigate, thus enhancing the status of public participation. |
| The Measures for Public Participation in Environmental Protection (2015) | Provide specific institutional norms for public participation in collaborative environmental governance. |
| Action Plan for Prevention and Control of Water Pollution (2015) | Provide the public and social organizations with training and consultation on water pollution prevention and control laws and regulations, encourage them to participate in environmental law enforcement and water pollution incident investigations throughout the process, improve the reporting system, and actively promote environmental public interest litigation. |
| Opinions on Full Implementation of the River Chief System (2016) | Expand public participation channels in the basic principles and proposed specific measures to strengthen social supervision. |

The principle of public participation/collaborative governance is only generally touched upon but not highlighted.

Who are the stakeholders?

Nansi Lake Basin

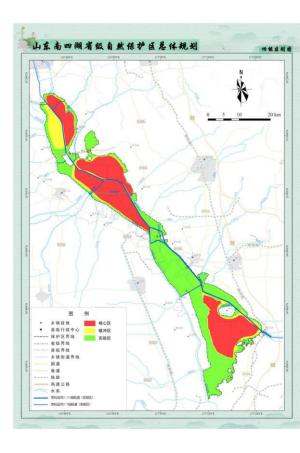

Institutional evolution of Nansi Lake governance

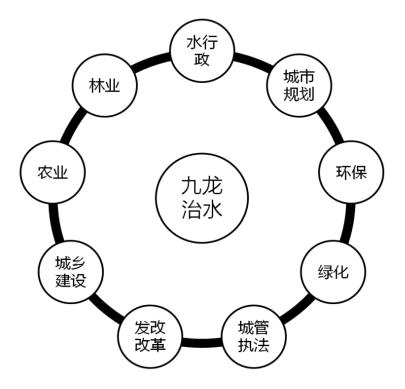

Closely related to national strategies:

- South-to-North Water Transfer Projects (East Route)
- Grand Canal Culture Belt
- Ecological Protection and High-quality Development Plan of the Yellow River Basin

Nansi Lake Provincial Nature Reserve - National Forestry and Grassland Administration The Huaihe River Commission of the Ministry of Water Resources – Ministry of Water Resources River/Lake Chief System - top leaders at all levels of local governments

- Jining City Nansi Lake Basin Management Office
- Nansi Lake Nature Reserve Service Centre
- Jining City Development and Reform Commission
- Jining City Civil Affairs Bureau
- Jining City Finance Bureau
- Jining City Natural Resources and Planning Bureau
- Jining City Ecological Environment Bureau
- Jining City Housing and Urban-Rural Construction Bureau
- Jining City Transportation Bureau
- Jining City Urban and Rural Water Bureau
- Jining City Agriculture and Rural Affairs Bureau
- Jining City Culture and Tourism Bureau

水利部淮委行政许可文件

准许可决[2021]107号

水利部淮河水利委员会关于济宁市南水北调供水 有限公司南四湖地表水供水项目取水许可 延续准子行政许可决定书

济宁市南水北调供水有限公司: 你公司《关于法宁市南水北) 赤理延续取水许可的请示》(济) 材料收悉, 按照国务院《取水许可 务院令第460号)和水利带 《取: 济宁市生态环境局文件 34号)等有关规定。我委组织对任 评估,经研究,决定如下: 一, 同意你公司延续取水中;

> 88273291924 对市政协十三局五次会议第135278号 提案的答复

2003: STNWT

山东南西湖省级自然保护区总体规划(2020-2029年) 评审意见 2019年12月15日,山东省自然资源厅组织有关专家(名

早附后)在济南召开了《山东南四湖省级自然保护区总体规 划(2020-2029 年)》(以下简称《规划》)评审会。专家 版审阅了相关材料, 听取了《规划》汇报, 经质询讨论, 月 成如下意见: 一、山水南四湖省级自然保护区于 2003 年 6 月 6 日由 山水省人民政府批准设立(書政字 (2003) 218 号), 2019 年11月4日山东省人民政府以春政年(2019)209 号文对山 东南回湖省级自然保护区范围和功能区的调整进行了批复。 调整后总重积为 111651.07 公顷,其中核心区 45114.80 公顷, 缓冲区 12696.70 公顷, 实验区 53839.57 公顷,属于"自然 生态系统" 类别中的"内陆灌地和水域生态系统" 类型有线 保护区,主要保护对象为典型的内陆淡水湖泊和水域生态系

二、《规划》符合《自然保护区总体规划技术规程》等 要求,指导思想和规划原则明确,保护对象清晰,规划内容 较全面,规划的项目布局基本合理,提出的保障措施可行。 专家巡问意《规划》通过评审、建议优化工程建设内容 后按程序模批。

River/lake chief system

"iron hand"

- Fragmentation of functional department
- The boundary of power and responsibility is unclear
- The incoordination between the responsibilities and powers:
 - cross departments
 - cross jurisdictions
 - cross levels
- Limited space and mechanism for expert argumentation, private sector engagement and public participation

Returning fishponds to lake (RFTL) project (2018-2020)

- Livelihood was greatly affected under constrained development
- Rural exodus
- Vulnerable groups / uneven eco-compensation
- "Sacrifice for the country and environment"
- Local community's participation is limited at the end, without proper consultation
- Ignore local knowledge

Local communities' participation for sustainable water governance after RFTL

Thank you!
